Meeting Minutes

University Course Registration & Recommendation System

1. Meeting Information

Project: University Course Registration & Recommendation System

Meeting: Week 8 - Improving the SRS, Setting Requirement Priorities and Writing Formal Requirement Statements

Date: 2026/11/05

Time: 4:00 pm

Location: South-3,106

Attendees:

Roll	Name	Role
202480090226	Numaier Islam Khan	Leader
202480090104	MD Tasnimul Hasan	Team member
202480090108	Shahedul Alam	Team member
202480090184	MD Zayed Shikder	Team member
202480090200	MD Fahamud Alam Chowdhury Fuad	Team member
202480090222	Abdullah Al Toha	Team member

Meeting Purpose: To improve the current Software Requirement Specification (SRS), decide the necessary SRS chapters, rephrase the requirement statements formally, and set and label the priority of each requirement.

2. Agenda

1. Discuss the objectives of the session.
2. Step 1 - Preparation: rephrase the software requirement statements and decide the chapters the SRS should include.
3. Step 2 - Prioritization: set the requirement priorities and label every requirement with its priority.
4. Summarize decisions and assign tasks.
5. Plan the next meeting.

3. Discussion

3.1 Objectives of the Session

The group reviewed the three objectives for this session:

1. Improve the current Software Requirement Specification.
2. Set the requirement priorities.

3. Write formal software requirement statements.

   It was agreed that the work would be done in two steps: Step 1 (Preparation) and Step 2 (Prioritization).

3.2 Step 1 - Preparation: Rephrasing the Requirement Statements

The group discussed that the current requirement statements should be rephrased so they are clear, complete and can be checked. The following writing rules were agreed:

1. Each requirement shall be assigned a unique identifier in the format REQ-<AREA>-<number> (for example, REQ-REG-001), so that it can be referenced clearly and traced throughout the document.
2. Each requirement shall be written as a formal statement using the word “shall”, following the pattern: “The system shall <action> <object> <condition, if any>.” (for example, “The system shall send a confirmation email to the user after a successful sign-up.”)
3. Each statement contains only one requirement.
4. Statements avoid vague words such as "easy", "fast", "etc." and "and so on".
5. Quality and performance statements use measurable values (for example, time, number of users or percentage).
6. Each requirement carries a priority label (see Section 3.4).

3.3 Step 1 - Preparation: SRS Chapters

The group agreed that the SRS should include all the necessary chapters. The chapter structure to be followed is shown below. Chapter 3 may also be grouped by use case instead of by feature. The chapters on Internationalization and localization requirements and on Other requirements are not required and will be left out.

Chapter	Contents
1. Introduction	1.1 Purpose, 1.2 Document conventions, 1.3 Project scope, 1.4 References
2. Overall description	2.1 Product perspective, 2.2 User classes and characteristics, 2.3 Operating environment, 2.4 Design and implementation constraints, 2.5 Assumptions and dependencies
3. System features	3.1 System feature , with 3.1.1 Description and 3.1.2 Functional requirements. Can also be grouped by use case (3.1 Use case 1, 3.2 Use case 2, and so on), each with a Description and Functional requirements
4. Data requirements	4.1 Logical data model, 4.2 Data dictionary, 4.3 Reports, 4.4 Data acquisition, integrity, retention and disposal
5. External interface requirements	5.1 User interfaces, 5.2 Software interfaces, 5.3 Hardware interfaces, 5.4 Communications interfaces
6. Quality attributes	6.1 Usability, 6.2 Performance, 6.3 Security, 6.4 Safety, 6.x Others
Appendix A	Glossary
Appendix B	Analysis models

3.4 Step 2 - Prioritization

The group agreed to set a priority for every requirement and to label each requirement with that priority. The MoSCoW method was chosen because it is simple and easy to explain to the client:

Priority	Meaning
Must	The system cannot be accepted or used without this requirement.
Should	Important, but the system still works without it for a short time (a workaround exists).
Could	Desirable, and included only if time and resources allow.
Won't (this release)	Agreed not to be delivered in this release; may be considered in a future phase.

Priorities will be set by group discussion using the following criteria:

1. How important the requirement is to the main purpose of the system.
2. How many other requirements depend on it.
3. What the client has said is important.
4. The effort and risk involved in building it.

Each requirement will show its label next to its ID. Requirements in the same group start with the same priority, unless the group decides otherwise.

4. Decisions Made

1. The SRS will be improved by following the agreed chapter structure.
2. The chapters on Internationalization and localization and on Other requirements will be omitted.
3. All requirements will be rephrased as formal statements with unique IDs, using "shall".
4. Each statement will contain one requirement and use measurable values where possible.
5. The MoSCoW method will be used to set priorities.
6. Every requirement will be labelled with its priority.

5. Action Items

Participant	Task	Deadline
Numaier Islam Khan	Create the SRS template with the agreed chapter structure and draft the minutes of this meeting.	2026/11/05
Shahedul Alam	Rephrase the assigned requirement statements into the formal format (ID, "shall", one requirement per statement).	2026/11/05
MD Zayed Shikder	Rephrase the remaining assigned requirement statements into the formal format.	2026/11/05
MD Tasnimul Hasan	Write the quality-attribute statements for Chapter 6 with measurable values.	2026/11/05
MD Fahamud Alam Chowdhury Fuad	Propose a priority for each requirement and add the priority label next to every requirement ID.	2026/11/05

Participant	Task	Deadline
Abdullah Al Toha	Prepare Chapters 4 and 5, Appendix A (Glossary) and Appendix B (Analysis models).	2026/11/05
All Members	Review the combined SRS for clear wording, correct chapters and priority labels.	Before next meeting

6. Follow-up

The team will complete the assigned tasks and review them together. The next meeting will focus on checking the rephrased requirements, confirming the priority labels, and finalizing the SRS for submission.
