Meeting Minutes

1. Meeting Information

Project: University Course Registration & Recommendation System

Meeting: Week 7 - Requirements Elicitation through Stakeholder Interviews and Workshop

Date: 2026/10/22

Time: 4:00 pm
Location: South-3,106
Attendees:

Roll	Name	Role
202480090226	Numaier Islam Khan	Leader
202480090104	MD Tasnimul Hasan	Team member
202480090108	Shahedul Alam	Team member
202480090184	MD Zayed Shikder	Team member
202480090200	MD Fahamud Alam Chowdhury Fuad	Team member
202480090222	Abdullah Al Toha	Team member

Meeting Purpose: The purpose of this session was to conduct two interview sessions and a stakeholder workshop to gather, discuss, and clarify the requirements of the Course Management System.

2. Agenda

1. Review the existing requirements of the Course Management System.
2. Conduct a role-play interview with Group 5.
3. Interview the teacher acting as the client using the prepared questions.
4. Discuss stakeholder needs, expectations, and system requirements.
5. Clarify unclear requirements and identify missing information.
6. Summarize the interview and workshop findings.
7. Discuss necessary changes to the existing requirements list.
8. Plan the next steps for updating SRS Version 3.

3. Discussion

3.1 Role-Play Interview: Questions from Group 5

1.Which feature do you consider the most important in your system, and why?

Answer:

Course Registration is the most important feature because it is the core purpose of the system. Without it, students cannot enroll in classes, and other features like grading, payments, and dashboards would have no data to function. It directly impacts the student experience and enforces academic rules (like prerequisites).

2.What do you think is the biggest problem with the current university course management system, and how does your solution address it?

Answer:

Biggest Problem:

The current system is fragmented and manual using paper forms, and disconnected software. This causes slow registration, prerequisite errors, delayed grades, payment queues, and no real-time data for admins.

How Our Solution Addresses It:

We centralize everything into one cloud-based platform with:

- Automated registration (real-time prerequisite and schedule conflict checks)
- Integrated online payments
- Digital grade appeal workflow
- Role-based dashboards for real-time visibility

3.Are there any features you initially planned to include but later decided to remove? What made you change your mind?

Answer:

- Direct Electricity Meter Integration: Removed due to high hardware complexity, cost, and security risks. Replaced with manual Admin entry.
- Student-Created Campus Events: Removed to prevent spam and moderation issues. Now only Admins/Faculty can create events.
- Automatic Waitlist Enrollment: Removed because students might no longer want the course or have schedule clashes. Replaced with a confirmation notification (e.g., 24-hour deadline) before enrollment.

4.How are you planning to visualize students' degree progress? Are you using a tree,a progress bar, or something else?

Answer:

We are using a Progress Bar (for overall credit completion) combined with a

Checklist/Curriculum Map (for detailed course requirements).We chose this over a tree because a tree becomes too messy for 120+ credits, while a progress bar and checklist are clearer and more mobile-friendly.

5.When a student selects two courses with overlapping schedules, does your system simply warn them, or does it prevent them from adding the second course?

Answer:

Our system prevents the student from adding the second course.It acts as a hard block, not just a warning. If the system detects a time conflict, it will show an error message and disable the "Confirm Registration" button, forcing the student to choose a different section or course.Why? Because allowing students to enroll in overlapping classes creates unresolvable issues later for faculty attendance, exam scheduling, and room allocation.

6.How are you managing different user permissions, especially for students, professors, and administrators?

Answer:

Students

Can: Register for courses, view their own grades, pay fees, view their own degree progress, and

update non-sensitive personal info.

Cannot: View other students' data, submit grades, or create courses/events.

Professors (Faculty)

Can: View rosters only for their assigned courses, submit grades, view their course analytics,

and create campus events.

Cannot: Modify tuition fees, manage system-wide settings, or access other professors' courses.

Administrators

Can: Manage the entire system—create courses, assign faculty, approve grade appeals, handle

payments, manage user accounts, assign temporary roles, and view all analytics.

Cannot: Change their own role or bypass core academic rules (like prerequisite checks).

7.If you had more time or resources, what feature would you improve or add to your system?

Answer:

• 1.Improve: AI-Powered Course Recommendation & Advising

• 2. Add: Native Mobile App with Push Notifications
• 3. Add: Advanced Analytics for Faculty & Admins
• 4. Improve: Automated Waitlist & Smart Scheduling

3.2 Role-Play Interview: Questions from Our Team

1. We need high security. Does your system support MFA and Role-Based Access Control (RBAC)?

Answer: "Yes, our system uses MFA for admins and teachers. RBAC ensures that a student can only register for courses, while an Admin can manage users and system settings."

2. During registration week, our servers get overwhelmed. How many concurrent users can your system handle?

Answer: "Our system is built for scalability and can handle at least 5,000 concurrent users, with a response time of under 3 seconds for registration requests."

3. How does your system prevent double-booking a seat or double-spending money from the wallet?

Answer: "We use ACID-compliant database transactions (Data Consistency). Every seat allocation and wallet payment is processed as an all-or-nothing step, so no seat is given twice and no money is spent twice."

4. If a student pays for the campus bus but the transaction fails, how do they get a refund?

Answer: "Failed transactions are automatically reconciled. The amount is refunded to the wallet instantly and appears in the transaction history. Admin has a tamper-proof audit log for all transactions."

5. We have over 50,000 students. Do you recommend a cloud platform for this?

Answer: "Yes, we highly recommend hosting on AWS or Azure for scalability, automated daily backups, and 99.9% availability during registration periods."

6. How are notifications handled? We want students to know immediately if they get off the waitlist.

Answer: "Our system sends notifications via in-app alerts, email, and mobile push notifications. Waitlist promotions trigger an immediate push notification."

7. Can Advisors see the academic progress of their assigned students?

Answer: "Yes, Advisors have a dedicated dashboard to see pending approval requests, student CGPA, failed courses, and they can leave comments or suggest courses."

3.3 Interview with the Teacher as Client

Q1. Should Multi-Factor Authentication (MFA) be mandatory for students, or should it be required only for teachers and administrators?

Answer: Yes, Multi-Factor Authentication (MFA) should be mandatory for students, teachers, and administrators.

Q2. Should the system completely prevent students from registering for a course if they have not passed the prerequisite course?

Answer: Yes, the system should block students from registering for courses if they have not met the prerequisites. Administrators may manage exceptional cases.

Q5. Should students be allowed to update their own personal information, or should every change require administrator approval?

Answer: No, students should not be allowed to update their personal information independently; administrator approval is required

Q6. Should the system automatically lock a user's account after multiple failed login attempts?

Answer: Yes, the system should automatically lock a user's account after multiple failed login attempts.

Q7. Should Academic Advisors be able to view the complete academic history of their assigned students, including failed courses?

Answer: Yes, Academic Advisors and teachers should be able to view the academic history.

3.4 Summary of Findings

The session provided practical experience in conducting stakeholder interviews, asking follow-up questions, and explaining system design decisions. The two role-play interviews focused on evaluating system features and technical requirements, while the teacher interview addressed specific requirements and operational rules. The findings will be reviewed to identify confirmed decisions, unresolved questions, and necessary changes to the existing requirements list for SRS Version 3.

4. Action Items

Participant	Task	Deadline
Numaier Islam Khan	Document the questions our team asked Group 5 and their responses.	2026/10/22
Shahedul Alam	Record the questions asked to the teacher acting as the client and document the actual answers.	2026/10/22
MD Zayed Shikder	Review the interview findings and compare them with the existing requirements list.	2026/10/22
MD Tasnimul Hasan	Prepare and update the meeting minutes based on the interview activities and discussion.	2026/10/22
MD Fahamud Chowdhury Fuad	Coordinate the team's activities and ensure all tasks are completed on time.	2026/10/22
Abdullah Al Toha	Organize and document the questions and answers from the interview conducted by Group 5.	2026/10/22
All Members	Review and complete the full SRS	Before next meeting

5. Follow-up

The team will review the interview findings, clarify any remaining requirements, and update the requirements list accordingly. The next meeting will focus on reviewing the revised requirements, finalizing SRS Version 3, and preparing the meeting minutes for submission.
